EBU4201 Introductory Java Programming 2024/25

Mini-viva Instructions for Mini-Project: Shapeville

Purpose

The purpose of the mini-viva is to test your application and gain a good understanding of your project process, design choices etc. The goal is not to trick you, but to gather some insights into your project in discussion with you so that the marking can be done fairly and consistently.

What (not)to bring

- You must bring your Queen Mary Student ID card. You will NOT be able to do the viva without your ID.
- Do NOT bring any computers.

Procedure

- Arrive outside the room before the start time of your slot.
- Enter the room when the assessors call you in (this may be 5-10 minutes after your start time). If any members of the group are not present at this time, they will NOT get another chance to participate in the viva and will receive zero for the Q&A portion (25%).
- Provide your ID card to the assessors when requested.
- There will be two assessors – one will inspect your application while the other will go through your report. They will have your submission on their computers.
- The "Application Functionality" section will only be carried out if your source files compile and run successfully on the assessor's computer by using the standard javac/java commands and/or any extended commands provided in your user-manual.
- The mini-viva will be recorded (audio-only).
- You will be asked several questions; some for the whole group and some for individual students. Every student will be asked at least one question.
- Answer questions honestly and with respect to the assessors.
- All assessors have received the same training and will mark based on the same criteria.
- The questions presented to each group/student may be different but will be of the same level of difficulty.
- You have a 30-minute slot; however, the actual viva will last only about 15 minutes.
- You must leave the room as soon as the assessors request you to.
